ICE/ITS/Q0201-SI005: A.I (Artificial Intelligence) - Technocrat

Brief Job Description

AI Technocrats design and implement artificial intelligence solutions across diverse engineering disciplines. They optimize systems and processes using intelligent algorithms and automation, enhancing efficiency and innovation. Their work focuses on developing AI-driven tools that address industry challenges while promoting sustainability by reducing waste and energy consumption, ultimately fostering ecological balance and improving operational performance across various Engineering sectors.

Personal Attributes

They are analytical, adaptive collaborative with strong problem-solving skills and a commitment to continuous learning in AI technologies.

Applicable National Occupational Standards (NOS)

Compulsory NOS:

1. ICE/ITS/N0201: Fundamentals of Artificial Intelligence (AI)
2. ICE/ITS/N0202: Python Programming and data science for AI
3. ICE/ITS/N0203: Building Blocks of Artificial Intelligence (A.I)
4. DGT/VSQ/N0102: Employability Skills (60 Hours)

Electives*(mandatory to select at least one):*

Elective : Applications of AI in Civil Domain

This document, identifies and explores the various applications of artificial intelligence (AI) tools and algorithms within the field of civil engineering. It outlines how AI can enhance processes such as design, construction, project management, and maintenance, ultimately leading to increased efficiency, improved safety, and more sustainable practices in civil engineering projects.

1. ICE/ITS/N0208: Applications of AI tools/algorithms in Civil Engineering

ICE/ITS/N0201: Fundamentals of Artificial Intelligence (AI)

Description

This unit covers the Fundamental of Artificial Intelligence (AI) exploring the foundational ideas, key techniques and widespread use of A.I across various fields.

Scope

The scope covers the following :

- This introductory unit explores core concepts like machine learning, neural networks, and natural language processing. And on how AI is applied in automation, decision-making, and problem-solving. Furthermore, this also addresses the ethical implications, current limitations, and the exciting future prospects of AI technology.

Elements and Performance Criteria

Introduction to AI

To be competent, the user/individual on the job must be able to:

PC1. Understand the basic concepts and definitions of Artificial Intelligence and its significance in various technical trades.

PC2. Demonstrate knowledge of AI applications in technical fields, such as predictive maintenance, automation, quality control, and resource optimization.

PC3. Explain the role of machine learning and data analytics in enhancing decision-making processes within technical trades.

PC4. Understand the importance of data collection and management for effective AI implementation including the use of IoT devices and sensors.

PC5. Evaluate the impact of AI on workflow efficiency, cost reduction, and productivity improvement in various technical trades.

The Ethical Landscape of AI and its Societal Impact

To be competent, the user/individual on the job must be able to:

PC6. Understand the core principles of AI ethics, including fairness, accountability, transparency, and the responsible use of AI technologies.

PC7. Describe the impact of AI on privacy and surveillance, discussing the ethical considerations surrounding data collection and user consent.

PC8. Explore the implications of AI on employment and workforce dynamics including the potential for job displacement and the need for workforce reskilling.

PC9. Understand the importance of regulatory frameworks and policies in governing AI technologies to ensure ethical practices and protect societal interests.

PC10. Analyze ethical considerations and challenges associated with the adoption of AI technologies, such as data privacy concerns, potential job displacement, and algorithmic bias

PC11. Discuss the potential societal benefits of AI, such as improved healthcare, enhanced public safety, and advancements in education while recognising the associated ethical challenges.

Aptitude & Mathematics Fundamentals

To be competent, the user/individual on the job must be able to:

PC12. Describe basic mathematical concepts, including algebra, calculus, and statistics, essential for understanding AI algorithms and models.

PC13. Understand the principles of linear algebra, including vectors, matrices, and operations, and their applications in machine learning and data manipulation.

PC14. Discuss probability theory to analyse uncertainty in AI models, including concepts such as conditional probability, Bayes' theorem, and distributions

PC15. Explain statistical methods for data analysis, including hypothesis testing, regression analysis and descriptive statistics.

PC16. Understand the significance of optimization techniques, including gradient descent and convex optimization in training machine learning models.

Data Handling

To be competent, the user/individual on the job must be able to:

PC17. Understand the importance of data quality and data cleaning processes including handling missing values, outliers and duplicates to ensure reliable AI model performance.

PC18. Explain data pre-processing techniques, such as normalization, standardization, and encoding categorical variables, to prepare data for analysis

PC19. Describe data exploration and visualization techniques using tools like Matplotlib and Seaborn to understand data distributions, correlations, and trends.

PC20. Understand the significance of data splitting methods (e.g., training, validation, and test sets) in building robust AI models and preventing overfitting.

PC21. Examine techniques for storing and retrieving data, including databases, data lakes, and data warehouses, for effective data management.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. Core definition of Artificial Intelligence and its distinction from traditional computing, including concepts like machine learning, deep learning, and neural networks.

KU2. Historical development of AI, key milestones, and influential figures in the field.

KU3. Different types of AI, including narrow AI (specific tasks) and general AI (human-like capabilities), along with their implications.

KU4. Fundamental concepts of machine learning, including supervised, unsupervised, and reinforcement learning paradigms

KU5. Critical role of data in AI, including data collection, pre-processing, and the significance of high- quality datasets for model training.

KU6. Key algorithms used in AI and machine learning, such as decision trees, support vector machines, and neural networks

KU7. Various applications of AI across industries, including healthcare, finance, transportation, and entertainment, and their societal impact.

KU8. Awareness of emerging trends in AI, such as advancements in natural language processing, computer vision.

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. Listen and communicate effectively and accurately.
GS2. Apply problem-solving approaches for different situations.
GS3. Work effectively in a team.
GS4. Employ proper time management.
GS5. Plan and organize work.
GS6. Maintain hygiene and sanitation.
GS7. Apply analytical skills for solving problems.

ICE/ITS/N0202: Python Programming and data science for AI

Description

This module emphasizes the use of Python for developing and applying AI algorithms. It provides a comprehensive overview of how to implement these technologies effectively. Participants will learn to harness Python's capabilities in the field of artificial intelligence.

Scope

The scope covers the following :

- It covers Python libraries such as NumPy, Pandas, TensorFlow, and PyTorch, which are essential for machine learning and deep learning data processing. This also includes practical programming techniques for building AI models, handling datasets, and creating AI-powered solutions.

Elements and Performance Criteria

Introduction to Python Programming

To be competent, the user/individual on the job must be able to:

PC1. Understand Python syntax, including variables, data types, loops, and conditionals for basic programming tasks.

PC2. Discuss fundamental Python data structures such as lists, dictionaries, tuples, and sets in data manipulation.

PC3. Discuss to utilize Python functions and modules to write reusable and efficient code.

PC4. Understand to use Python for file handling operations such as reading from and writing to files.

PC5. Describe to use of Python libraries like NumPy and Pandas for basic data manipulation and analysis tasks.

PC6. Discuss basic debugging and error-handling techniques to identify and resolve issues in Python programs

Data Structures and Algorithms in Python

To be competent, the user/individual on the job must be able to:

PC7. Understand the fundamentals data structures such as arrays, linked lists, stacks, queues, trees, and graphs in Python.

PC8. Describe to utilize Python's built-in data structures, such as lists, dictionaries, sets, and tuples, to solve problems effectively.

PC9. Discuss common algorithms for sorting (e.g., bubble sort, quicksort, mergesort) and searching (e.g., linear search, binary search) on various data structures.

PC10. Understand the concepts of complexity analysis, including time and space complexity, to evaluate the efficiency of algorithms.

PC11. Describe recursion and its applications in solving problems, including tree traversal and backtracking algorithms.

PC12. Understand to solve practical problems and to utilize data structures to optimize performance in Python applications.

Object-Oriented Programming (OOP) in Python

To be competent, the user/individual on the job must be able to:

PC13. Understand the core principles of Object-Oriented Programming (OOP), including encapsulation, inheritance, and polymorphism.

PC14. Define to use classes and objects in Python to model real-world entities and behaviors.

PC15. Discuss constructor and destructor methods to initialize and clean up object attributes in Python classes.

PC16. Understand to utilize class inheritance to create subclasses to extend or modify the functionality of parent classes.

PC17. Describe method overriding to customize the behavior of inherited methods in derived classes.

PC18. Discuss the concept of abstraction through abstract classes and interfaces to understand the design concept of flexible and modular code.

Libraries for AI and Data Science

To be competent, the user/individual on the job must be able to:

PC19. Understand to use NumPy for numerical computations including array manipulation, mathematical operations and linear algebra.

PC20. Describe Pandas for data manipulation and analysis to utilize dataFrames for data cleaning, transformation and aggregation tasks.

PC21. Understand data visualization techniques using Matplotlib and Seaborn to create informative plots and graphs Seaborn.

PC22. Discuss to utilize Scikit-learn for building and evaluating machine learning models, including data preprocessing, feature selection and model selection techniques.

PC23. Understand to use TensorFlow or PyTorch for developing and training deep learning models, including defining architectures and optimizing performance.

PC24. Discuss Natural Language Toolkit (NLTK) or spaCy for text processing tasks in Natural Language Processing (NLP), including tokenization, stemming and recognition.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. Core syntax and fundamental concepts of Python, including variables, data types, control structures, functions, and error handling.

KU2. Python data structures such as lists, tuples, dictionaries, and sets, and their appropriate use cases in programming.

KU3. Key Python libraries used in data science and AI, including NumPy for numerical operations, Pandas for data manipulation, and Matplotlib/Seaborn for data visualization

KU4. Methods for cleaning and preprocessing data, including handling missing values, normalization, standardization, and encoding categorical variables.

KU5. Principles of object-oriented programming (OOP) in Python, including classes, objects, inheritance, encapsulation, and polymorphism.

KU6. Ability to create visualizations to interpret data and communicate findings effectively using libraries like Matplotlib and Seaborn.

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. Listen and communicate effectively and accurately.
GS2. Apply problem-solving approaches for different situations
GS3. Work effectively in a team.
GS4. Employ proper time management.
GS5. Plan and organize work.
GS6. Maintain hygiene and sanitation.
GS7. Analytical skills.

ICE/ITS/N0203: Building Blocks of Artificial Intelligence (A.I)

Description

The Build Blocks of A.I. Specializations provide essential knowledge in AI concepts, algorithms, and methodologies across various domains, including machine learning and natural language processing, computer vision, Internet of things and Robotics.

Scope

The scope covers the following :

- Practical applications in diverse industries.
- Addresses ethical implications and responsible AI use.
- Fosters innovation to solve real-world problems with AI technologies.

Elements and Performance Criteria

Fundamentals of Machine Learning (ML)

To be competent, the user/individual on the job must be able to:

PC1. Explain the core concepts of supervised, unsupervised, and reinforcement learning.

PC2. Understand regression and classification models.

PC3. Discuss data preprocessing techniques, such as normalization and feature extraction to prepare data for ML models.

PC4. Explain key ML algorithms, such as decision trees, support vector machines, and k-means clustering.

PC5. Describe model performance using metrics like accuracy, precision, recall, F1-score, and ROC curves.

PC6. Understand model optimization techniques, including hyperparameter tuning and cross-validation.

Basics of Deep Learning

To be competent, the user/individual on the job must be able to:

PC7. Understand the core architecture of artificial neural networks (ANNs), including layers, nodes, and activation functions.

PC8. Discuss building and training feedforward neural networks using deep learning frameworks (e.g., TensorFlow, PyTorch).

PC9. Explain the concept of backpropagation and its role in optimizing neural networks.

PC10. Describe convolutional neural networks (CNNs) for image-related tasks such as classification and object detection.

PC11. Understand the basics of recurrent neural networks (RNNs) and their applications in sequence data like time series and natural language.

PC12. Understand to utilize regularization techniques to prevent overfitting in deep learning models.

Fundamentals of Natural Language Processing (NLP)

To be competent, the user/individual on the job must be able to:

PC13. Understand the basic concepts of tokenization, stemming, and lemmatization for text preprocessing.

PC14. Explain building and applying language models for text prediction and generation.

PC15. Explain the use of word embeddings (e.g., Word2Vec, GloVe) to represent text data as vectors in NLP tasks.

PC16. Describe NLP techniques for tasks such as sentiment analysis, text classification and named entity recognition (NER).

PC17. Understand sequence-to-sequence models for machine translation, summarization and other text-based tasks.

PC18. Understand to evaluate metrics like BLEU, ROUGE to assess the performance of NLP models.

Basics of Computer Vision

To be competent, the user/individual on the job must be able to:

PC19. Understand the key concepts of image processing such as filtering, edge detection and image enhancement.

PC20. Discuss building and applying Convolutional Neural Networks (CNNs) for tasks like image classification and object detection.

PC21. Describe techniques for image segmentation to separate objects or regions within an image.

PC22. Discuss image augmentation techniques to improve model generalization and performance on visual tasks.

PC23. Explain the principles of object tracking and motion detection in video processing.

PC24. Understand feature extraction methods like SIFT, SURF, and ORB for object recognition and computer vision applications.

Fundamentals of Internet of Things (IoT)

To be competent, the user/individual on the job must be able to:

PC25. Understand the basic architecture of IoT systems, including sensors, actuators, and communication protocols.

PC26. Explain to connect and configure IoT devices for data collection and monitoring.

PC27. Explain the role of edge computing and its integration with IoT to process data locally for faster responses.

PC28. Understand the principles of IoT communication protocols such as MQTT, CoAP, and HTTP, and their applications.

PC29. Describe data security and privacy concerns in IoT systems, including encryption and authentication techniques.

PC30. Describe IoT for smart systems design, such as smart homes, industrial automation, or environmental monitoring.

Basics of Robotics

To be competent, the user/individual on the job must be able to:

PC31. Explain the fundamental concepts of robot kinematics, including forward and inverse kinematics for robot movement and positioning.

PC32. Understand the programming robot control systems for tasks such as navigation, manipulation, and automation.

PC33. Discuss sensor integration (e.g., cameras, LIDAR, ultrasonic sensors) for robot perception and environment interaction.

PC34. Understand the basics of robot dynamics and forces and torques affect robot motion and stability.

PC35. Understand ability to implement robot path planning algorithms to enable autonomous navigation in dynamic environments.

PC36. Discuss robotic learning techniques, such as reinforcement learning, to improve robot decision-making and task execution.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. Basic concepts of machine learning, including different types of learning (supervised, unsupervised, and reinforcement) and their applications in various domains.

KU2. Deep learning architectures, including neural networks, convolutional neural networks (CNNs), and recurrent neural networks (RNNs), and their role in AI advancements.

KU3. Fundamental techniques and tools used in NLP, such as tokenization, stemming, and sentiment analysis, and their applications in text and speech processing.

KU4. Principles of computer vision, including image processing techniques, feature extraction, and object detection, along with their applications in industries like healthcare and automotive.

KU5. IoT concepts, including sensor integration, data collection, and the use of AI in smart devices for automation and enhanced decision-making.

KU6. Principles of robotics, including perception, decision-making, and control systems, and AI technologies are integrated to improve robot functionalities.

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. Listen and communicate effectively and accurately.

GS2. Apply problem-solving approaches for different situations.

GS3. Work effectively in a team.

GS4. Employ proper time management.

GS5. Plan and organize work.

GS6. Maintain hygiene and sanitation.

GS7. Analytical Skills.

Qualification Pack

DGT/VSQ/N0102: Employability Skills (60 Hours)

Description

This unit is about employability skills, Constitutional values, becoming a professional in the 21st Century, digital, financial, and legal literacy, diversity and Inclusion, English and communication skills, customer service, entrepreneurship, and apprenticeship, getting ready for jobs and career development.

Scope

The scope covers the following :

- Introduction to Employability Skills
- Constitutional values - Citizenship
- Becoming a Professional in the 21st Century
- Basic English Skills
- Career Development & Goal Setting
- Communication Skills
- Diversity & Inclusion
- Financial and Legal Literacy
- Essential Digital Skills
- Entrepreneurship
- Customer Service
- Getting ready for Apprenticeship & Jobs

Elements and Performance Criteria

Introduction to Employability Skills

To be competent, the user/individual on the job must be able to:

PC1. identify employability skills required for jobs in various industries

PC2. identify and explore learning and employability portals

Constitutional values – Citizenship

To be competent, the user/individual on the job must be able to:

PC3. recognize the significance of constitutional values, including civic rights and duties, citizenship, responsibility towards society etc. and personal values and ethics such as honesty, integrity, caring and respecting others, etc.

PC4. follow environmentally sustainable practices

Becoming a Professional in the 21st Century

To be competent, the user/individual on the job must be able to:

PC5. recognize the significance of 21st Century Skills for employment

PC6. practice the 21st Century Skills such as Self-Awareness, Behaviour Skills, time management, critical and adaptive thinking, problem-solving, creative thinking, social and cultural awareness, emotional awareness, learning to learn for continuous learning etc. in personal and professional life

Basic English Skills

To be competent, the user/individual on the job must be able to:

PC7. use basic English for everyday conversation in different contexts, in person and over the telephone

PC8. read and understand routine information, notes, instructions, mails, letters etc. written in English

PC9. write short messages, notes, letters, e-mails etc. in English

Career Development & Goal Setting

To be competent, the user/individual on the job must be able to:

PC10. understand the difference between job and career

PC11. prepare a career development plan with short- and long-term goals, based on aptitude

Communication Skills

To be competent, the user/individual on the job must be able to:

PC12. follow verbal and non-verbal communication etiquette and active listening techniques in various settings

PC13. work collaboratively with others in a team

Diversity & Inclusion

To be competent, the user/individual on the job must be able to:

PC14. communicate and behave appropriately with all genders and PwD

PC15. escalate any issues related to sexual harassment at workplace according to POSH Act

Financial and Legal Literacy

To be competent, the user/individual on the job must be able to:

PC16. select financial institutions, products and services as per requirement

PC17. carry out offline and online financial transactions, safely and securely

PC18. identify common components of salary and compute income, expenses, taxes, investments etc

PC19. identify relevant rights and laws and use legal aids to fight against legal exploitation

Essential Digital Skills

To be competent, the user/individual on the job must be able to:

PC20. operate digital devices and carry out basic internet operations securely and safely

PC21. use e- mail and social media platforms and virtual collaboration tools to work effectively

PC22. use basic features of word processor, spreadsheets, and presentations

Entrepreneurship

To be competent, the user/individual on the job must be able to:

PC23. identify different types of Entrepreneurship and Enterprises and assess opportunities for potential business through research

PC24. develop a business plan and a work model, considering the 4Ps of Marketing Product, Price, Place and Promotion

PC25. identify sources of funding, anticipate, and mitigate any financial/ legal hurdles for the potential business opportunity

Customer Service

To be competent, the user/individual on the job must be able to:

PC26. identify different types of customers

PC27. identify and respond to customer requests and needs in a professional manner.

PC28. follow appropriate hygiene and grooming standards

Getting ready for apprenticeship & Jobs

To be competent, the user/individual on the job must be able to:

PC29. create a professional Curriculum vitae (Résumé)

PC30. search for suitable jobs using reliable offline and online sources such as Employment exchange, recruitment agencies, newspapers etc. and job portals, respectively

PC31. apply to identified job openings using offline /online methods as per requirement

PC32. answer questions politely, with clarity and confidence, during recruitment and selection

PC33. identify apprenticeship opportunities and register for it as per guidelines and requirements

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. need for employability skills and different learning and employability related portals

KU2. various constitutional and personal values

KU3. different environmentally sustainable practices and their importance

KU4. Twenty first (21st) century skills and their importance

KU5. how to use English language for effective verbal (face to face and telephonic) and written communication in formal and informal set up

KU6. importance of career development and setting long- and short-term goals

KU7. about effective communication

KU8. POSH Act

KU9. Gender sensitivity and inclusivity

KU10. different types of financial institutes, products, and services

KU11. how to compute income and expenditure

KU12. importance of maintaining safety and security in offline and online financial transactions

KU13. different legal rights and laws

KU14. different types of digital devices and the procedure to operate them safely and securely

KU15. how to create and operate an e- mail account and use applications such as word processors, spreadsheets etc.

KU16. how to identify business opportunities

KU17. types and needs of customers

KU18. how to apply for a job and prepare for an interview

KU19. apprenticeship scheme and the process of registering on apprenticeship portal

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. read and write different types of documents/instructions/correspondence

GS2. communicate effectively using appropriate language in formal and informal settings

GS3. behave politely and appropriately with all
GS4. how to work in a virtual mode
GS5. perform calculations efficiently
GS6. solve problems effectively
GS7. pay attention to details
GS8. manage time efficiently
GS9. maintain hygiene and sanitization to avoid infection

Assessment Criteria

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
Introduction to Employability Skills	**1**	**1**	**-**	**-**

ICE/ITS/N0208: Applications of AI tools/algorithms in Civil Engineering

Description

This module provides learners with the tools and knowledge needed to effectively utilize AI in civil engineering, focusing on optimizing design and construction processes while enhancing decision-making and sustainability. Additionally, it covers the use of advanced analytics for infrastructure management, resource allocation, and predictive maintenance.

Scope

The scope covers the following :

- Includes applications in structural analysis and design.
- Enhances construction management and project scheduling.
- Describe to geotechnical engineering for soil and foundation analysis.
- Involves transportation systems optimization and traffic management.
- Supports environmental engineering for sustainable practices.
- Aids in urban planning and the development of resilient infrastructure.

Elements and Performance Criteria

Utilize AI tools /algorithms in Structural Engineering

To be competent, the user/individual on the job must be able to:

PC1. Discuss AI algorithms analyze data from sensors embedded in structures to monitor their health and detect anomalies.

PC2. Explain machine learning models to predict structures respond to various loads and environmental factors which aids in optimizing design and enhancing structural integrity.

PC3. Describe AI tools assist in optimizing structural designs by evaluating multiple parameters simultaneously.

PC4. Explore AI algorithms analyze the performance of different materials under various conditions, facilitating informed decisions about material selection and usage in structural applications.

PC5. Understand AI to assess risks associated with structural failures, including environmental impacts, and predicting potential vulnerabilities which enhances overall safety and resilience.

PC6. Discuss AI in robotic systems for automated construction tasks, such as precision placement of structural elements which improves efficiency and reduces human error in construction projects.

Use AI tools /algorithms in Construction Management

To be competent, the user/individual on the job must be able to:

PC7. Understand AI algorithms analyze project data to optimize scheduling, predicting task durations and resource allocation which improves project timelines and reduces delays.

PC8. Discuss AI tools automate cost estimation processes by analyzing historical data and current market trends, leading to more accurate budgets and effective financial management throughout the project lifecycle.

PC9. Understand AI-driven risk assessment models allows for the identification and evaluation of potential risks associated with construction projects, facilitating proactive mitigation strategies and enhancing project safety.

PC10. Explore AI optimize resource allocation by predicting demand for labor, materials, and equipment, ensuring that resources are efficiently used and reducing waste.

PC11. Describe AI-powered image recognition and analysis tools to monitor construction quality in real-time, enabling quicker detection of defects and adherence to project specifications.

Utilize AI tools /algorithms in Geotechnical Engineering

To be competent, the user/individual on the job must be able to:

PC12. Discuss AI algorithms analyze soil samples and historical data to predict soil properties, such as shear strength and compressibility, enhancing the accuracy of geotechnical assessments and reducing reliance on time-consuming laboratory tests.

PC13. Describe Machine learning models process large datasets from geological surveys and remote sensing technologies, enabling better site characterization and identification of subsurface conditions critical for design and construction.

PC14. Discuss AI tools simulate various environmental conditions and loading scenarios to assess slope stability, providing engineers with insights to mitigate risks of landslides and ensure safe construction practices.

PC15. Explain AI algorithms optimize foundation design by analyzing factors such as load distribution, soil properties, and site constraints, leading to more efficient and cost-effective foundation solutions.

PC16. Understand AI for monitoring and predicting the performance of geotechnical structures (like retaining walls and tunnels) helps in scheduling maintenance and preventing failures through early detection of potential issues.

PC17. Discuss AI tools facilitate comprehensive risk assessment models that analyze various factors affecting geotechnical projects, enabling engineers to develop effective risk mitigation strategies and ensure safer construction practices.

Use AI tools /algorithms in Transportation Engineering

To be competent, the user/individual on the job must be able to:

PC18. Understand AI algorithms analyze historical traffic data and real-time inputs to predict traffic patterns, enabling more effective traffic management and optimization of signal timings to reduce congestion.

PC19. Discuss AI in smart transportation systems facilitates real-time monitoring and control of transportation infrastructure, including adaptive traffic signals and dynamic message signs that adjust based on traffic conditions.

PC20. Describe AI tools provide optimal routing solutions for logistics and public transport systems by analyzing various factors, such as traffic conditions, road closures, and vehicle capacities, improving overall efficiency and reducing travel times.

PC21. Understand AI for predictive maintenance of transportation infrastructure, such as bridges and roads, enables early detection of structural issues through the analysis of sensor data, ensuring safety and longevity.

PC22. Explain AI algorithms automate traffic management processes by integrating data from various sources (cameras, sensors, and GPS) to enhance decision-making for managing incidents, accidents, and unusual traffic patterns.

PC23. Understand AI assist in evaluating the environmental impacts of transportation projects by analyzing data related to emissions, noise, and land use, helping engineers make informed decisions to promote sustainable transportation solutions.

Utilize AI tools /algorithms in Environmental and Water Resources Engineering

To be competent, the user/individual on the job must be able to:

PC24. Understand AI algorithms analyze data from sensors deployed in water bodies to continuously monitor water quality parameters (e.g., pH, turbidity, and contaminants), enabling timely interventions and ensuring compliance with environmental standards.

PC25. Explain machine learning models, engineers predict flood events based on historical data, rainfall patterns, and topographical features, allowing for better preparedness and resource allocation in flood-prone areas.

PC26. Explore AI tools to enhance the efficiency of water distribution networks by analyzing flow data, leak detection, and demand forecasting, leading to reduced water loss and improved service delivery in urban environments.

PC27. Discuss AI tools streamline the process of environmental impact assessments (EIAs) by analyzing vast amounts of data related to ecosystems, land use, and potential project impacts, helping to identify risks and propose mitigation strategies.

PC28. Understand AI algorithms be applied to predict maintenance needs for water treatment plants and distribution systems by analyzing equipment performance data and identifying patterns that indicate potential failures.

PC29. Describe AI facilitate the modeling of ecosystems and hydrological systems to evaluate the impact of various engineering projects, helping to balance development needs with environmental sustainability and resource conservation.

Use AI tools /algorithms in Urban Planning and Smart Cities

To be competent, the user/individual on the job must be able to:

PC30. Understand AI algorithms analyze real-time traffic data to optimize traffic flow, reduce congestion, and improve transportation efficiency in urban areas. This includes adaptive traffic signal control and predictive modeling of traffic patterns.

PC31. Describe AI tools assist in urban planning by predicting the demand for essential services (e.g., water, electricity, and waste management) based on population growth and usage patterns, leading to more efficient resource distribution and management.

PC32. Discuss AI analyze satellite imagery and weather data to identify urban heat islands and suggest interventions (e.g., increasing green spaces or reflective materials) that help cool cities and improve residents' quality of life.

PC33. Understand machine learning algorithms analyze historical data on crime, accidents, and emergencies to identify high-risk areas and optimize the placement of public safety resources, ensuring timely responses to incidents.

PC34. Understand AI be employed to monitor the health of urban infrastructure (e.g., bridges, roads, and buildings) using sensors and predictive analytics, enabling proactive maintenance and reducing the risk of failures.

PC35. Discuss AI tools facilitate community engagement by analyzing social media sentiment and public feedback, helping urban planners to understand community needs and preferences, ultimately leading to more inclusive and effective urban development strategies.

Utilize AI tools /algorithms in Construction Automation

To be competent, the user/individual on the job must be able to:

PC36. Understand AI-driven robots and drones perform tasks such as site surveying, material handling, and inspection.

PC37. Explain AI algorithms predict equipment failures and maintenance needs by analyzing historical data and sensor readings.

PC38. Describe AI analyze visual data from construction sites to identify defects in real-time, ensuring that construction quality meets standards.

PC39. Discuss AI tools assist in generating and optimizing design alternatives using algorithms that evaluate structural integrity, material usage, and cost.

PC40. Understand AI algorithms analyze site conditions and worker behaviors to predict and mitigate safety risks.

PC41. Discuss AI tools automate project scheduling and resource allocation by analyzing project timelines, available resources, and potential risks.

Use AI tools /algorithms for Sustainable Civil Engineering

To be competent, the user/individual on the job must be able to:

PC42. Understand AI algorithms analyze building designs and materials to optimize energy efficiency.

PC43. Discuss AI tools in selecting sustainable building materials by evaluating factors such as environmental impact, lifecycle analysis, and cost-effectiveness.

PC44. Decribe AI tools enhance waste management in construction projects by predicting waste generation patterns and optimizing recycling processes.

PC45. Understand AI algorithms model and manage water usage in construction projects, ensuring efficient water consumption and minimizing waste.

PC46. Explain AI tools analyze climate data to model the impact of environmental changes on infrastructure.

Advancement in AI for Civil Engineering

To be competent, the user/individual on the job must be able to:

PC47. Explain AI-driven generative design tools allow engineers to explore a wide range of design alternatives quickly.

PC48. Understand advanced machine learning algorithms analyze data from sensors embedded in structures to detect anomalies and predict maintenance needs.

PC49. Describe AI applications utilizing natural language processing (NLP) help civil engineers navigate complex regulatory documents and codes.

PC50. Explain AI algorithms analyze vast datasets related to environmental conditions, enabling more accurate predictions of a project's ecological impact.

PC51. Understand advances in AI-powered robotics are transforming construction sites, enabling automated tasks such as bricklaying, welding, and excavation.

PC52. Explore AI technologies are essential for developing smart cities, where civil engineering projects are inter-connected through IoT devices.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. AI algorithms optimize structural designs by analyzing various parameters (e.g., materials, load conditions, and geometric configurations) to find the most efficient designs that meet safety and performance standards.

KU2. AI tools analyze data from sensors embedded in infrastructure (such as bridges and roads) to predict maintenance needs and potential failures, enhancing safety and extending the lifespan of civil structures.

KU3. AI algorithms improve project scheduling and resource allocation by analyzing historical project data, optimizing timelines, and predicting potential delays, thereby enhancing overall efficiency in construction management.

KU4. AI applications in traffic engineering analyze real-time traffic data to optimize traffic signal timings, predict congestion, and propose efficient routing solutions, improving urban mobility.

KU5. AI algorithms in geotechnical engineering by analyzing soil properties and predicting ground behavior under different loading conditions, which helps in designing foundations and earth-retaining structures.

KU6. AI tools analyze data related to environmental factors, helping engineers assess the potential impacts of construction projects on local ecosystems and water resources, leading to more sustainable designs.

KU7. AI tools to facilitate the development of smart cities by integrating various data sources (e.g., traffic, energy consumption, and weather patterns) to optimize urban planning and resource management.

KU8. Machine learning algorithms identify and evaluate risks associated with construction projects, allowing engineers to implement mitigation strategies proactively and ensure safety.

KU9. AI-powered image analysis process data from drones and satellite imagery to monitor construction progress, assess land use, and conduct site surveys, improving accuracy and efficiency in civil engineering practices.

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. Listen and communicate effectively and accurately.

GS2. Apply problem-solving approaches for different situations.

GS3. Work effectively in a team.

GS4. Employ proper time management.

GS5. Plan and organize work.

GS6. Maintain hygiene and sanitation.

GS7. Analytical Skills.

PC42. Understand AI algorithms analyze building designs and materials to optimize energy efficiency.	-	-	-	-
PC43. Discuss AI tools in selecting sustainable building materials by evaluating factors such as environmental impact, lifecycle analysis, and cost-effectiveness.	-	-	-	-
PC44. Decribe AI tools enhance waste management in construction projects by predicting waste generation patterns and optimizing recycling processes.	-	-	-	-
PC45. Understand AI algorithms model and manage water usage in construction projects, ensuring efficient water consumption and minimizing waste.	-	-	-	-
PC46. Explain AI tools analyze climate data to model the impact of environmental changes on infrastructure.	-	-	-	-
Advancement in AI for Civil Engineering	**4**	**5**	**-**	**1**
PC47. Explain AI-driven generative design tools allow engineers to explore a wide range of design alternatives quickly.	-	-	-	-
PC48. Understand advanced machine learning algorithms analyze data from sensors embedded in structures to detect anomalies and predict maintenance needs.	-	-	-	-

Assessment Criteria for Outcomes	Theory Marks	Practical Marks	Project Marks	Viva Marks
PC49. Describe AI applications utilizing natural language processing (NLP) help civil engineers navigate complex regulatory documents and codes.	-	-	-	-
PC50. Explain AI algorithms analyze vast datasets related to environmental conditions, enabling more accurate predictions of a project's ecological impact.	-	-	-	-
PC51. Understand advances in AI-powered robotics are transforming construction sites, enabling automated tasks such as bricklaying, welding, and excavation.	-	-	-	-
PC52. Explore AI technologies are essential for developing smart cities, where civil engineering projects are inter-connected through IoT devices.	-	-	-	-
NOS Total	**40**	**50**	**-**	**10**

National Occupational Standards (NOS) Parameters

NOS Code	ICE/ITS/N0208
NOS Name	Applications of AI tools/algorithms in Civil Engineering
Sector	Information Technology Sector
Sub-Sector	
Occupation	Artificial Intelligence
NSQF Level	5
Credits	10
Version	1.0
Last Reviewed Date	17/12/2024
Next Review Date	17/12/2027
NSQC Clearance Date	17/12/2024

Assessment Guidelines and Assessment Weightage

Assessment Guidelines

Criteria for assessment for each Qualification Pack will be created by the Awarding Body. Each Performance Criteria (PC)/ Element will be assigned marks proportional to its importance in NOS. AB will also lay down proportion of marks for Theory and Skills Practical for each PC/ Element.

2. The assessment for the knowledge part will be based on knowledge bank of questions created by Assessment Bodies subject to approval by AB

3. Individual assessment agencies will create unique question papers for knowledge/theory part for assessment of candidates as per assessment criteria given below

4. Individual assessment agencies will create unique evaluations for skill practical for every student at each examination/training center based on assessment criteria.

5. The passing percentage for each QP will be 70%. To pass the Qualification Pack, every trainee should score a minimum of 70% individually in each NOS.

6. The Assessor shall check the final outcome of the practices while evaluating the steps performed to achieve the final outcome.

7. The trainee shall be provided with a chance to repeat the test to correct his procedures in case of improper performance, with a deduction of marks for each iteration.

8. After the certain number of iterations as decided by AB the trainee is marked as fail, scoring zero marks for the procedure for the practical activity.

9. In case of successfully passing only certain number of NOS's, the trainee is eligible to take subsequent assessment on the balance NOS's to pass the Qualification Pack within the specified time frame set by AB.

10. Minimum duration of Assessment of each QP shall be of 4hrs/trainee

Minimum Aggregate Passing % at QP Level : 70

(**Please note**: Every Trainee should score a minimum aggregate passing percentage as specified above, to successfully clear the Qualification Pack assessment.)

Assessment Weightage

Compulsory NOS

National Occupational Standards	Theory Marks	Practical Marks	Project Marks	Viva Marks	Total Marks	Weightage
