ICE/ITS/Q0201-SI002: A.I (Artificial Intelligence) - Technocrat

Brief Job Description

AI Technocrats design and implement artificial intelligence solutions across diverse engineering disciplines. They optimize systems and processes using intelligent algorithms and automation, enhancing efficiency and innovation. Their work focuses on developing AI-driven tools that address industry challenges while promoting sustainability by reducing waste and energy consumption, ultimately fostering ecological balance and improving operational performance across various Engineering sectors.

Personal Attributes

They are analytical, adaptive collaborative with strong problem-solving skills and a commitment to continuous learning in AI technologies.

Applicable National Occupational Standards (NOS)

Compulsory NOS:

1. ICE/ITS/N0201: Fundamentals of Artificial Intelligence (AI)
2. ICE/ITS/N0202: Python Programming and data science for AI
3. ICE/ITS/N0203: Building Blocks of Artificial Intelligence (A.I)
4. DGT/VSQ/N0102: Employability Skills (60 Hours)

Electives*(mandatory to select at least one):*

Elective : Applications of AI in ECE Domain

This focuses on the applications of artificial intelligence (AI) tools and algorithms within the field of Electronics and Communication Engineering (ECE). It explores various ways AI can enhance and innovate the design, analysis, and optimization of electronic systems and communication networks. Topics may include machine learning, data processing, signal analysis, and smart communication techniques, highlighting real-world applications and emerging trends in the ECE domain. This course aims to equip students with the knowledge and skills to effectively integrate AI technologies into ECE practices.

1. ICE/ITS/N0205: Applications of AI tools/algorithms in Electronics & Communication Engineering

ICE/ITS/N0201: Fundamentals of Artificial Intelligence (AI)

Description

This unit covers the Fundamental of Artificial Intelligence (AI) exploring the foundational ideas, key techniques and widespread use of A.I across various fields.

Scope

The scope covers the following :

- This introductory unit explores core concepts like machine learning, neural networks, and natural language processing. And on how AI is applied in automation, decision-making, and problem-solving. Furthermore, this also addresses the ethical implications, current limitations, and the exciting future prospects of AI technology.

Elements and Performance Criteria

Introduction to AI

To be competent, the user/individual on the job must be able to:

PC1. Understand the basic concepts and definitions of Artificial Intelligence and its significance in various technical trades.

PC2. Demonstrate knowledge of AI applications in technical fields, such as predictive maintenance, automation, quality control, and resource optimization.

PC3. Explain the role of machine learning and data analytics in enhancing decision-making processes within technical trades.

PC4. Understand the importance of data collection and management for effective AI implementation including the use of IoT devices and sensors.

PC5. Evaluate the impact of AI on workflow efficiency, cost reduction, and productivity improvement in various technical trades.

The Ethical Landscape of AI and its Societal Impact

To be competent, the user/individual on the job must be able to:

PC6. Understand the core principles of AI ethics, including fairness, accountability, transparency, and the responsible use of AI technologies.

PC7. Describe the impact of AI on privacy and surveillance, discussing the ethical considerations surrounding data collection and user consent.

PC8. Explore the implications of AI on employment and workforce dynamics including the potential for job displacement and the need for workforce reskilling.

PC9. Understand the importance of regulatory frameworks and policies in governing AI technologies to ensure ethical practices and protect societal interests.

PC10. Analyze ethical considerations and challenges associated with the adoption of AI technologies, such as data privacy concerns, potential job displacement, and algorithmic bias

PC11. Discuss the potential societal benefits of AI, such as improved healthcare, enhanced public safety, and advancements in education while recognising the associated ethical challenges.

Aptitude & Mathematics Fundamentals

To be competent, the user/individual on the job must be able to:

PC12. Describe basic mathematical concepts, including algebra, calculus, and statistics, essential for understanding AI algorithms and models.

PC13. Understand the principles of linear algebra, including vectors, matrices, and operations, and their applications in machine learning and data manipulation.

PC14. Discuss probability theory to analyse uncertainty in AI models, including concepts such as conditional probability, Bayes' theorem, and distributions

PC15. Explain statistical methods for data analysis, including hypothesis testing, regression analysis and descriptive statistics.

PC16. Understand the significance of optimization techniques, including gradient descent and convex optimization in training machine learning models.

Data Handling

To be competent, the user/individual on the job must be able to:

PC17. Understand the importance of data quality and data cleaning processes including handling missing values, outliers and duplicates to ensure reliable AI model performance.

PC18. Explain data pre-processing techniques, such as normalization, standardization, and encoding categorical variables, to prepare data for analysis

PC19. Describe data exploration and visualization techniques using tools like Matplotlib and Seaborn to understand data distributions, correlations, and trends.

PC20. Understand the significance of data splitting methods (e.g., training, validation, and test sets) in building robust AI models and preventing overfitting.

PC21. Examine techniques for storing and retrieving data, including databases, data lakes, and data warehouses, for effective data management.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. Core definition of Artificial Intelligence and its distinction from traditional computing, including concepts like machine learning, deep learning, and neural networks.

KU2. Historical development of AI, key milestones, and influential figures in the field.

KU3. Different types of AI, including narrow AI (specific tasks) and general AI (human-like capabilities), along with their implications.

KU4. Fundamental concepts of machine learning, including supervised, unsupervised, and reinforcement learning paradigms

KU5. Critical role of data in AI, including data collection, pre-processing, and the significance of high- quality datasets for model training.

KU6. Key algorithms used in AI and machine learning, such as decision trees, support vector machines, and neural networks

KU7. Various applications of AI across industries, including healthcare, finance, transportation, and entertainment, and their societal impact.

KU8. Awareness of emerging trends in AI, such as advancements in natural language processing, computer vision.

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. Listen and communicate effectively and accurately.
GS2. Apply problem-solving approaches for different situations.
GS3. Work effectively in a team.
GS4. Employ proper time management.
GS5. Plan and organize work.
GS6. Maintain hygiene and sanitation.
GS7. Apply analytical skills for solving problems.

ICE/ITS/N0202: Python Programming and data science for AI

Description

This module emphasizes the use of Python for developing and applying AI algorithms. It provides a comprehensive overview of how to implement these technologies effectively. Participants will learn to harness Python's capabilities in the field of artificial intelligence.

Scope

The scope covers the following :

- It covers Python libraries such as NumPy, Pandas, TensorFlow, and PyTorch, which are essential for machine learning and deep learning data processing. This also includes practical programming techniques for building AI models, handling datasets, and creating AI-powered solutions.

Elements and Performance Criteria

Introduction to Python Programming

To be competent, the user/individual on the job must be able to:

PC1. Understand Python syntax, including variables, data types, loops, and conditionals for basic programming tasks.

PC2. Discuss fundamental Python data structures such as lists, dictionaries, tuples, and sets in data manipulation.

PC3. Discuss to utilize Python functions and modules to write reusable and efficient code.

PC4. Understand to use Python for file handling operations such as reading from and writing to files.

PC5. Describe to use of Python libraries like NumPy and Pandas for basic data manipulation and analysis tasks.

PC6. Discuss basic debugging and error-handling techniques to identify and resolve issues in Python programs

Data Structures and Algorithms in Python

To be competent, the user/individual on the job must be able to:

PC7. Understand the fundamentals data structures such as arrays, linked lists, stacks, queues, trees, and graphs in Python.

PC8. Describe to utilize Python's built-in data structures, such as lists, dictionaries, sets, and tuples, to solve problems effectively.

PC9. Discuss common algorithms for sorting (e.g., bubble sort, quicksort, mergesort) and searching (e.g., linear search, binary search) on various data structures.

PC10. Understand the concepts of complexity analysis, including time and space complexity, to evaluate the efficiency of algorithms.

PC11. Describe recursion and its applications in solving problems, including tree traversal and backtracking algorithms.

PC12. Understand to solve practical problems and to utilize data structures to optimize performance in Python applications.

Object-Oriented Programming (OOP) in Python

To be competent, the user/individual on the job must be able to:

PC13. Understand the core principles of Object-Oriented Programming (OOP), including encapsulation, inheritance, and polymorphism.

PC14. Define to use classes and objects in Python to model real-world entities and behaviors.

PC15. Discuss constructor and destructor methods to initialize and clean up object attributes in Python classes.

PC16. Understand to utilize class inheritance to create subclasses to extend or modify the functionality of parent classes.

PC17. Describe method overriding to customize the behavior of inherited methods in derived classes.

PC18. Discuss the concept of abstraction through abstract classes and interfaces to understand the design concept of flexible and modular code.

Libraries for AI and Data Science

To be competent, the user/individual on the job must be able to:

PC19. Understand to use NumPy for numerical computations including array manipulation, mathematical operations and linear algebra.

PC20. Describe Pandas for data manipulation and analysis to utilize dataFrames for data cleaning, transformation and aggregation tasks.

PC21. Understand data visualization techniques using Matplotlib and Seaborn to create informative plots and graphs Seaborn.

PC22. Discuss to utilize Scikit-learn for building and evaluating machine learning models, including data preprocessing, feature selection and model selection techniques.

PC23. Understand to use TensorFlow or PyTorch for developing and training deep learning models, including defining architectures and optimizing performance.

PC24. Discuss Natural Language Toolkit (NLTK) or spaCy for text processing tasks in Natural Language Processing (NLP), including tokenization, stemming and recognition.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. Core syntax and fundamental concepts of Python, including variables, data types, control structures, functions, and error handling.

KU2. Python data structures such as lists, tuples, dictionaries, and sets, and their appropriate use cases in programming.

KU3. Key Python libraries used in data science and AI, including NumPy for numerical operations, Pandas for data manipulation, and Matplotlib/Seaborn for data visualization

KU4. Methods for cleaning and preprocessing data, including handling missing values, normalization, standardization, and encoding categorical variables.

KU5. Principles of object-oriented programming (OOP) in Python, including classes, objects, inheritance, encapsulation, and polymorphism.

KU6. Ability to create visualizations to interpret data and communicate findings effectively using libraries like Matplotlib and Seaborn.

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. Listen and communicate effectively and accurately.
GS2. Apply problem-solving approaches for different situations
GS3. Work effectively in a team.
GS4. Employ proper time management.
GS5. Plan and organize work.
GS6. Maintain hygiene and sanitation.
GS7. Analytical skills.

ICE/ITS/N0203: Building Blocks of Artificial Intelligence (A.I)

Description

The Build Blocks of A.I. Specializations provide essential knowledge in AI concepts, algorithms, and methodologies across various domains, including machine learning and natural language processing, computer vision, Internet of things and Robotics.

Scope

The scope covers the following :

- Practical applications in diverse industries.
- Addresses ethical implications and responsible AI use.
- Fosters innovation to solve real-world problems with AI technologies.

Elements and Performance Criteria

Fundamentals of Machine Learning (ML)

To be competent, the user/individual on the job must be able to:

PC1. Explain the core concepts of supervised, unsupervised, and reinforcement learning.

PC2. Understand regression and classification models.

PC3. Discuss data preprocessing techniques, such as normalization and feature extraction to prepare data for ML models.

PC4. Explain key ML algorithms, such as decision trees, support vector machines, and k-means clustering.

PC5. Describe model performance using metrics like accuracy, precision, recall, F1-score, and ROC curves.

PC6. Understand model optimization techniques, including hyperparameter tuning and cross-validation.

Basics of Deep Learning

To be competent, the user/individual on the job must be able to:

PC7. Understand the core architecture of artificial neural networks (ANNs), including layers, nodes, and activation functions.

PC8. Discuss building and training feedforward neural networks using deep learning frameworks (e.g., TensorFlow, PyTorch).

PC9. Explain the concept of backpropagation and its role in optimizing neural networks.

PC10. Describe convolutional neural networks (CNNs) for image-related tasks such as classification and object detection.

PC11. Understand the basics of recurrent neural networks (RNNs) and their applications in sequence data like time series and natural language.

PC12. Understand to utilize regularization techniques to prevent overfitting in deep learning models.

Fundamentals of Natural Language Processing (NLP)

To be competent, the user/individual on the job must be able to:

PC13. Understand the basic concepts of tokenization, stemming, and lemmatization for text preprocessing.

PC14. Explain building and applying language models for text prediction and generation.

PC15. Explain the use of word embeddings (e.g., Word2Vec, GloVe) to represent text data as vectors in NLP tasks.

PC16. Describe NLP techniques for tasks such as sentiment analysis, text classification and named entity recognition (NER).

PC17. Understand sequence-to-sequence models for machine translation, summarization and other text-based tasks.

PC18. Understand to evaluate metrics like BLEU, ROUGE to assess the performance of NLP models.

Basics of Computer Vision

To be competent, the user/individual on the job must be able to:

PC19. Understand the key concepts of image processing such as filtering, edge detection and image enhancement.

PC20. Discuss building and applying Convolutional Neural Networks (CNNs) for tasks like image classification and object detection.

PC21. Describe techniques for image segmentation to separate objects or regions within an image.

PC22. Discuss image augmentation techniques to improve model generalization and performance on visual tasks.

PC23. Explain the principles of object tracking and motion detection in video processing.

PC24. Understand feature extraction methods like SIFT, SURF, and ORB for object recognition and computer vision applications.

Fundamentals of Internet of Things (IoT)

To be competent, the user/individual on the job must be able to:

PC25. Understand the basic architecture of IoT systems, including sensors, actuators, and communication protocols.

PC26. Explain to connect and configure IoT devices for data collection and monitoring.

PC27. Explain the role of edge computing and its integration with IoT to process data locally for faster responses.

PC28. Understand the principles of IoT communication protocols such as MQTT, CoAP, and HTTP, and their applications.

PC29. Describe data security and privacy concerns in IoT systems, including encryption and authentication techniques.

PC30. Describe IoT for smart systems design, such as smart homes, industrial automation, or environmental monitoring.

Basics of Robotics

To be competent, the user/individual on the job must be able to:

PC31. Explain the fundamental concepts of robot kinematics, including forward and inverse kinematics for robot movement and positioning.

PC32. Understand the programming robot control systems for tasks such as navigation, manipulation, and automation.

PC33. Discuss sensor integration (e.g., cameras, LIDAR, ultrasonic sensors) for robot perception and environment interaction.

PC34. Understand the basics of robot dynamics and forces and torques affect robot motion and stability.

PC35. Understand ability to implement robot path planning algorithms to enable autonomous navigation in dynamic environments.

PC36. Discuss robotic learning techniques, such as reinforcement learning, to improve robot decision-making and task execution.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. Basic concepts of machine learning, including different types of learning (supervised, unsupervised, and reinforcement) and their applications in various domains.

KU2. Deep learning architectures, including neural networks, convolutional neural networks (CNNs), and recurrent neural networks (RNNs), and their role in AI advancements.

KU3. Fundamental techniques and tools used in NLP, such as tokenization, stemming, and sentiment analysis, and their applications in text and speech processing.

KU4. Principles of computer vision, including image processing techniques, feature extraction, and object detection, along with their applications in industries like healthcare and automotive.

KU5. IoT concepts, including sensor integration, data collection, and the use of AI in smart devices for automation and enhanced decision-making.

KU6. Principles of robotics, including perception, decision-making, and control systems, and AI technologies are integrated to improve robot functionalities.

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. Listen and communicate effectively and accurately.

GS2. Apply problem-solving approaches for different situations.

GS3. Work effectively in a team.

GS4. Employ proper time management.

GS5. Plan and organize work.

GS6. Maintain hygiene and sanitation.

GS7. Analytical Skills.

Qualification Pack

DGT/VSQ/N0102: Employability Skills (60 Hours)

Description

This unit is about employability skills, Constitutional values, becoming a professional in the 21st Century, digital, financial, and legal literacy, diversity and Inclusion, English and communication skills, customer service, entrepreneurship, and apprenticeship, getting ready for jobs and career development.

Scope

The scope covers the following :

- Introduction to Employability Skills
- Constitutional values - Citizenship
- Becoming a Professional in the 21st Century
- Basic English Skills
- Career Development & Goal Setting
- Communication Skills
- Diversity & Inclusion
- Financial and Legal Literacy
- Essential Digital Skills
- Entrepreneurship
- Customer Service
- Getting ready for Apprenticeship & Jobs

Elements and Performance Criteria

Introduction to Employability Skills

To be competent, the user/individual on the job must be able to:

PC1. identify employability skills required for jobs in various industries

PC2. identify and explore learning and employability portals

Constitutional values – Citizenship

To be competent, the user/individual on the job must be able to:

PC3. recognize the significance of constitutional values, including civic rights and duties, citizenship, responsibility towards society etc. and personal values and ethics such as honesty, integrity, caring and respecting others, etc.

PC4. follow environmentally sustainable practices

Becoming a Professional in the 21st Century

To be competent, the user/individual on the job must be able to:

PC5. recognize the significance of 21st Century Skills for employment

PC6. practice the 21st Century Skills such as Self-Awareness, Behaviour Skills, time management, critical and adaptive thinking, problem-solving, creative thinking, social and cultural awareness, emotional awareness, learning to learn for continuous learning etc. in personal and professional life

Basic English Skills

To be competent, the user/individual on the job must be able to:

PC7. use basic English for everyday conversation in different contexts, in person and over the telephone

PC8. read and understand routine information, notes, instructions, mails, letters etc. written in English

PC9. write short messages, notes, letters, e-mails etc. in English

Career Development & Goal Setting

To be competent, the user/individual on the job must be able to:

PC10. understand the difference between job and career

PC11. prepare a career development plan with short- and long-term goals, based on aptitude

Communication Skills

To be competent, the user/individual on the job must be able to:

PC12. follow verbal and non-verbal communication etiquette and active listening techniques in various settings

PC13. work collaboratively with others in a team

Diversity & Inclusion

To be competent, the user/individual on the job must be able to:

PC14. communicate and behave appropriately with all genders and PwD

PC15. escalate any issues related to sexual harassment at workplace according to POSH Act

Financial and Legal Literacy

To be competent, the user/individual on the job must be able to:

PC16. select financial institutions, products and services as per requirement

PC17. carry out offline and online financial transactions, safely and securely

PC18. identify common components of salary and compute income, expenses, taxes, investments etc

PC19. identify relevant rights and laws and use legal aids to fight against legal exploitation

Essential Digital Skills

To be competent, the user/individual on the job must be able to:

PC20. operate digital devices and carry out basic internet operations securely and safely

PC21. use e- mail and social media platforms and virtual collaboration tools to work effectively

PC22. use basic features of word processor, spreadsheets, and presentations

Entrepreneurship

To be competent, the user/individual on the job must be able to:

PC23. identify different types of Entrepreneurship and Enterprises and assess opportunities for potential business through research

PC24. develop a business plan and a work model, considering the 4Ps of Marketing Product, Price, Place and Promotion

PC25. identify sources of funding, anticipate, and mitigate any financial/ legal hurdles for the potential business opportunity

Customer Service

To be competent, the user/individual on the job must be able to:

PC26. identify different types of customers

PC27. identify and respond to customer requests and needs in a professional manner.

PC28. follow appropriate hygiene and grooming standards

Getting ready for apprenticeship & Jobs

To be competent, the user/individual on the job must be able to:

PC29. create a professional Curriculum vitae (Résumé)

PC30. search for suitable jobs using reliable offline and online sources such as Employment exchange, recruitment agencies, newspapers etc. and job portals, respectively

PC31. apply to identified job openings using offline /online methods as per requirement

PC32. answer questions politely, with clarity and confidence, during recruitment and selection

PC33. identify apprenticeship opportunities and register for it as per guidelines and requirements

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. need for employability skills and different learning and employability related portals

KU2. various constitutional and personal values

KU3. different environmentally sustainable practices and their importance

KU4. Twenty first (21st) century skills and their importance

KU5. how to use English language for effective verbal (face to face and telephonic) and written communication in formal and informal set up

KU6. importance of career development and setting long- and short-term goals

KU7. about effective communication

KU8. POSH Act

KU9. Gender sensitivity and inclusivity

KU10. different types of financial institutes, products, and services

KU11. how to compute income and expenditure

KU12. importance of maintaining safety and security in offline and online financial transactions

KU13. different legal rights and laws

KU14. different types of digital devices and the procedure to operate them safely and securely

KU15. how to create and operate an e- mail account and use applications such as word processors, spreadsheets etc.

KU16. how to identify business opportunities

KU17. types and needs of customers

KU18. how to apply for a job and prepare for an interview

KU19. apprenticeship scheme and the process of registering on apprenticeship portal

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. read and write different types of documents/instructions/correspondence

GS2. communicate effectively using appropriate language in formal and informal settings

GS3. behave politely and appropriately with all
GS4. how to work in a virtual mode
GS5. perform calculations efficiently
GS6. solve problems effectively
GS7. pay attention to details
GS8. manage time efficiently
GS9. maintain hygiene and sanitization to avoid infection

Assessment Criteria

ICE/ITS/N0205: Applications of AI tools/algorithms in Electronics & Communication Engineering

Description

This course explores the integration of artificial intelligence (AI) techniques in Electronics and Communication Engineering (ECE) to enhance the performance, efficiency, and adaptability of modern electronic systems. It covers fundamental AI concepts, including machine learning, deep learning, and optimization algorithms, and their applications in signal processing, wireless communication, embedded systems, and circuit design. Through practical case studies and hands-on projects, students will learn to apply AI-driven data analysis, predictive modeling, and automation techniques to solve real-world challenges in ECE.

Scope

The scope covers the following :

- Optimizes signal processing techniques.
- Enhances communication systems and network performance.
- Develops intelligent embedded systems for IoT applications.
- Drives advancements in wireless communication technologies.
- Contributes to autonomous systems and smart technologies.
- Responds to real-time data and user interactions.

Elements and Performance Criteria

Utilize AI tools /algorithms in Signal Processing

To be competent, the user/individual on the job must be able to:

PC1. Understand AI algorithms, such as adaptive filters, to enhance signal quality by dynamically adjusting filter parameters in response to varying noise levels and signal characteristics.

PC2. Explain machine learning techniques to automate the extraction of relevant features from complex signals, improving the performance of signal classification and analysis tasks.

PC3. Discuss deep learning models for noise reduction in signals, enhancing the clarity and quality of audio and communication systems by effectively separating signal from noise.

PC4. Describe AI techniques to classify different modulation schemes in communication signals, facilitating improved spectrum management and efficient signal processing.

PC5. Discuss AI-driven tools to perform real-time analysis of signals, enabling immediate detection of anomalies and events in various applications such as telecommunications and radar systems.

PC6. Understand predictive analytics powered by AI to monitor the health of signal processing equipment, forecasting potential failures and enabling timely maintenance to minimize downtime.

Use AI tools /algorithms in Communication Systems

To be competent, the user/individual on the job must be able to:

PC7. Understand AI algorithms to improve channel estimation and equalization techniques in communication systems, enhancing signal integrity and reducing interference in varying channel conditions.

PC8. Discuss AI-driven strategies for dynamic resource allocation in communication networks, optimizing bandwidth usage and improving overall network efficiency based on real-time traffic demands.

PC9. Describe machine learning algorithms to develop intelligent routing protocols that optimize data paths in communication networks, reducing latency and improving data throughput.

PC10. Explore AI techniques to monitor and manage QoS parameters in communication systems, ensuring optimal performance by dynamically adjusting network resources based on user requirements.

PC11. Discuss AI tools to detect and respond to security threats in communication systems, employing anomaly detection and intrusion prevention techniques to safeguard data integrity and confidentiality.

PC12. Understand AI algorithms into signal processing chains for communication systems, enabling to enhance signal robustness and clarity.

Use AI tools /algorithms in Embedded Systems and IoT

To be competent, the user/individual on the job must be able to:

PC13. Explore AI algorithms to process and analyze data from smart sensors in embedded systems, enabling real-time decision-making and automation in various IoT applications.

PC14. Understand machine learning techniques to optimize energy consumption in embedded devices, improving battery life and performance in IoT applications through adaptive power management.

PC15. Discuss AI-driven predictive analytics in embedded systems to monitor device performance and predict failures, facilitating proactive maintenance and reducing downtime in IoT networks.

PC16. Describe AI algorithms for efficient data compression in IoT devices, ensuring reduced bandwidth usage and faster data transmission without compromising data integrity.

PC17. Discuss AI tools to detect anomalies in IoT data streams, enhancing security and reliability by identifying unusual patterns that may indicate faults or security breaches in embedded systems.

PC18. Understand AI algorithms into embedded control systems, enabling adaptive and intelligent control mechanisms for IoT devices, improving responsiveness and functionality in dynamic environments.

Utilize AI tools /algorithms in VLSI Design and Hardware Optimization

To be competent, the user/individual on the job must be able to:

PC19. Discuss AI algorithms to automate the circuit design process, enabling faster design iterations and improved accuracy in VLSI layout generation.

PC20. Explain machine learning techniques for efficient design rule checking in VLSI designs, ensuring compliance with manufacturing specifications and reducing errors in fabrication.

PC21. Describe AI-driven strategies to optimize power consumption in VLSI circuits, enhancing energy efficiency through adaptive voltage and frequency scaling based on workload requirements.

PC22. Discuss predictive analytics powered by AI to forecast the performance of VLSI designs, allowing designers to make informed decisions during the design process and identify potential bottlenecks.

PC23. Understand AI algorithms for fault detection and diagnosis in VLSI circuits, enhancing reliability by identifying and mitigating issues early in the design and manufacturing process.

PC24. Explain AI tools to optimize the physical layout of VLSI components, improving area efficiency and signal integrity while minimizing crosstalk and delays in high-density designs.

Use AI tools /algorithms in Robotics and Autonomous Systems

To be competent, the user/individual on the job must be able to:

PC25. Understand AI algorithms for efficient path planning and navigation in autonomous robots, enabling them to navigate complex environments and avoid obstacles in real-time.

PC26. Discuss machine learning techniques to integrate data from multiple sensors (e.g., cameras, LiDAR, and IMUs) in robotics.

PC27. Describe AI-driven decision-making algorithms in autonomous systems, allowing robots to analyze situations, assess risks, and make informed choices based on dynamic conditions.

PC28. Discuss natural language processing (NLP) and computer vision algorithms to facilitate intuitive human-robot interaction.

PC29. Discuss AI tools to develop robust control systems in robotics, ensuring stability and performance under varying operational conditions and disturbances.

PC30. Understand reinforcement learning techniques to enable robots to learn and improve their skills through trial and error.

Utilize AI tools /algorithms in Wireless Communication and Network Optimization

To be competent, the user/individual on the job must be able to:

PC31. Understand AI algorithms to dynamically allocate and manage spectrum resources in wireless communication, optimizing frequency usage and minimizing interference among users.

PC32. Discuss machine learning techniques to predict network traffic patterns, enabling proactive management of network resources and improving overall performance during peak usage times.

PC33. Describe AI-driven methods to enhance QoS in wireless networks, adjusting parameters such as bandwidth allocation and latency management based on real-time performance metrics.

PC34. Discuss AI tools to implement adaptive modulation and coding schemes in wireless communication, optimizing data transmission rates according to channel conditions.

PC35. Explain AI algorithms to detect anomalies in wireless network traffic, facilitating rapid identification of security threats or performance issues and enabling timely interventions.

PC36. Explore AI techniques to optimize energy consumption in wireless communication systems, enhancing battery life in devices and reducing overall energy costs while maintaining performance.

Use AI tools /algorithms in Electronic System Design and Optimization

To be competent, the user/individual on the job must be able to:

PC37. Understand AI algorithms to automatically verify design rules in electronic circuit layouts, ensuring compliance with industry standards and reducing errors in the manufacturing process.

PC38. Describe machine learning techniques to enhance the speed and accuracy of circuit simulations, allowing designers to predict system behavior under various conditions and optimize designs more effectively.

PC39. Discuss AI-driven optimization methods for effective resource allocation in electronic systems, improving performance while minimizing costs and material usage throughout the design process.

PC40. Understand AI tools to optimize the physical layout of electronic components on printed circuit boards (PCBs), enhancing signal integrity, reducing electromagnetic interference, and improving overall circuit performance.

Advancement in AI for ECE

To be competent, the user/individual on the job must be able to:

PC41. Discuss of advanced machine learning algorithms tailored for ECE applications, such as convolutional neural networks (CNNs) for image processing in computer vision and recurrent neural networks (RNNs) for time-series analysis in signal processing.

PC42. Understand AI to optimize the design and management of 5G networks and future wireless communication systems, reducing latency, and enhancing overall network performance.

PC43. Discuss advancements in AI-driven smart antenna technologies, enabling adaptive beamforming and spatial multiplexing to enhance signal quality and capacity in wireless communications.

PC44. Understand AI algorithms for real-time decision-making in robotics, allowing for improved navigation, obstacle avoidance and task execution in complex environments.

PC45. Discuss AI techniques for real-time fault detection and diagnosis in electronic systems, improving reliability and reducing maintenance costs through predictive maintenance strategies.

PC46. Decribe advancements in integrating AI with IoT devices for intelligent data processing and decision-making, allowing for smarter and more efficient communication in smart cities, healthcare and industrial applications.

Knowledge and Understanding (KU)

The individual on the job needs to know and understand:

KU1. Basic AI concepts, including machine learning, deep learning, and neural networks, and their relevance to electronics and communication systems.

KU2. AI algorithms enhance signal processing techniques, enabling improved noise reduction, signal classification, and data interpretation in communication systems.

KU3. AI-based methods for optimizing network performance, including traffic prediction, load balancing, and resource allocation in communication networks.

KU4. AI tools into embedded systems, enabling intelligent decision-making and automation in various electronic devices.

KU5. AI algorithms are applied in robotics for navigation, path planning, and task execution, enhancing the functionality of autonomous systems.

KU6. Role of AI in predictive maintenance, allowing for real-time monitoring and analysis of electronic systems to anticipate failures and reduce downtime.

KU7. AI applications that enhance communication systems, such as adaptive modulation techniques and error correction algorithms.

KU8. AI tools facilitate data-driven decision-making processes in electronic and communication engineering, allowing for real-time adjustments based on data analysis.

KU9. Application of AI in IoT frameworks, enhancing data collection, processing and analytics for smarter devices and systems.

Generic Skills (GS)

User/individual on the job needs to know how to:

GS1. Listen and communicate effectively and accurately.
GS2. Apply problem-solving approaches for different situations.
GS3. Work effectively in a team.
GS4. Employ proper time management.
GS5. Plan and organize work.
GS6. Maintain hygiene and sanitation.
GS7. Analytical Skills.

Assessment Guidelines and Assessment Weightage

Assessment Guidelines

Criteria for assessment for each Qualification Pack will be created by the Awarding Body. Each Performance Criteria (PC)/ Element will be assigned marks proportional to its importance in NOS. AB will also lay down proportion of marks for Theory and Skills Practical for each PC/ Element.

2. The assessment for the knowledge part will be based on knowledge bank of questions created by Assessment Bodies subject to approval by AB

3. Individual assessment agencies will create unique question papers for knowledge/theory part for assessment of candidates as per assessment criteria given below

4. Individual assessment agencies will create unique evaluations for skill practical for every student at each examination/training center based on assessment criteria.

5. The passing percentage for each QP will be 70%. To pass the Qualification Pack, every trainee should score a minimum of 70% individually in each NOS.

6. The Assessor shall check the final outcome of the practices while evaluating the steps performed to achieve the final outcome.

7. The trainee shall be provided with a chance to repeat the test to correct his procedures in case of improper performance, with a deduction of marks for each iteration.

8. After the certain number of iterations as decided by AB the trainee is marked as fail, scoring zero marks for the procedure for the practical activity.

9. In case of successfully passing only certain number of NOS's, the trainee is eligible to take subsequent assessment on the balance NOS's to pass the Qualification Pack within the specified time frame set by AB.

10. Minimum duration of Assessment of each QP shall be of 4hrs/trainee

Minimum Aggregate Passing % at QP Level : 70

(**Please note**: Every Trainee should score a minimum aggregate passing percentage as specified above, to successfully clear the Qualification Pack assessment.)

Assessment Weightage

Compulsory NOS

National Occupational Standards	Theory Marks	Practical Marks	Project Marks	Viva Marks	Total Marks	Weightage
ICE/ITS/N0201.Fundamentals of Artificial Intelligence (AI)	40	50	0	10	100	15
ICE/ITS/N0202.Python Programming and data science for AI	40	50	0	10	100	30
